

## SQL Experience -

In my senior year at CU Boulder, I took a course called INFO 3401-001: Information Exploration, where we learned SQL. Throughout the semester, we dove into querying relational databases, joining and filtering large datasets, writing nested queries, and performing data cleaning and aggregation. The course emphasized practical, hands-on work, and I became comfortable using SQL to explore data, answer research questions, and generate insights.

Unfortunately I am unable to access any of the work that we did because it was hosted on a CU Boulder site that I lost access to after I graduated. But I am open and willing to prove my proficiency using SQL as well as any other coding language I have listed on my resume.
